

Behavioural Neurology

An International Journal with an emphasis on Lesion and Imaging Studies that Explore Abnormal Human Cognition and Behaviour

Aims and Scope

Behavioural Neurology publishes original experimental papers and case reports dealing with disordered human behaviour and exceptional animal studies that have direct implications for understanding human behaviour or neural mechanisms of cognition. These embrace the field of cognitive neurology, biological psychiatry, neuropsychology, rehabilitation and cognitive neuroscience. The emphasis of the approach is on lesion and imaging studies that explore abnormal human cognition and behaviour. The journal embraces matters of interest to clinicians, such as behavioural neurologists and neuropsychiatrists, cognitive neuroscientists, neuropsychologists, neuropathologists, neurochemists, therapists, psychopharmacologists and metabolic scientists with a special interest in human neurological disorders. All papers are refereed. Reviews about literature and commentaries in areas of current interest will also be considered for publication. Reviews and commentaries which are of interest and importance to behavioural neurologists, but in areas outside behavioural neurology, will also be considered. A Clinical Notes section has been added for brief reports of clinical observations that may have important implications for understanding cognitive disorders. *Behavioural Neurology* also publishes Book Reviews and Short Communications.
