

# Technology and Disability

## Aims and Scope

*Technology and Disability* communicates knowledge about the field of assistive technology devices and services, within the context of the lives of end users - persons with disabilities and their family members. While the topics are technical in nature, the articles are written for broad comprehension despite the reader's education or training. *Technology and Disability's* contents cover research and development efforts, education and training programs, service and policy activities and consumer experiences.

- The term *Technology* refers to assistive devices and services.
- The term *Disability* refers to both permanent and temporary functional limitations experienced by people of any age within any circumstance.
- The term *and* underscores the editorial commitment to seek for articles which see technology linked to disability as a means to support or compensate the person in daily functioning.

The Editor-in-Chief also attempts to link the themes of technology and disability through the selection of appropriate basic and applied research papers, review articles, case studies, programme descriptions, letters to the Editor-in-Chief and commentaries. Suggestions for thematic issues and proposed manuscripts are welcomed.
