## Aims and Scope

*Main Group Chemistry* is intended to be a primary resource for all chemistry, engineering, biological, and materials researchers in both academia and in industry with an interest in the elements from the groups 1, 2, 12 - 18, lanthanides and actinides. The journal is committed to maintaining a high standard for its publications. This will be ensured by a rigorous peer-review process with most articles being reviewed by at least one editorial board member. Additionally, all manuscripts will be proofread and corrected by a dedicated copy editor located at the University of Kentucky.

The journal will publish rapid, short, communications, full, detailed articles, and shorter, less developed notes. Periodically, the editors will solicit reviews on the latest main group developments. In particular, we would like to eventually publish reviews covering every column of the main group elements, and some that are focused on single elements. This will advertise and showcase the beauty and breadth of main group chemistry.
