This publication brings together contributions by eminent specialists in the field of the theoretical determination of electric polarizability. The contents of this book cover a wide area of subjects relevant to Chemical Physics, Molecular Physics, Nonlinear Optics and Materials Science. Specific subjects Ab initio and Density functional theory calculations of electric polarizability and hyperpolarizability, intermolecular forces, aromaticity, molecular design, electric properties of solvated molecules, NLO materials, Raman intensities, polarizability of metal and semiconductor clusters, relativistic effects on electric properties, and more. Common experience had taught us that computational methods originally developed in a given basic science, e.g. physics, can be of paramount importance to other neighbouring sciences, e.g. chemistry, as well as to engineering or technology and, in turn, to society as a whole.

Contents:

- Polarizability functions of diatomic homonuclear molecules: Semiempirical approach/ M.A. Buldakov and V.N. Cherepanov
- Dipole polarizability and second hyperpolarizability of difluoroacetylene: Basis set dependence and electron correlation effects/ M. Medved, B. Champagne, J. Noga and E.A. Perpète
- PLS prediction of hyperpolarizabilities for donor-bridge-acceptor organic systems/ A.E. de A. Machado, B. de Barros Neto and A.A. de S. da Gama
- Collisional polarizability correlation functions: A step towards rotational-translational coupling/ W. Glaz
- Density functional calculations of the frequency-dependent optical rotation: Comparison of theory and experiment for the gas phase/ C. Diedrich, S. Caussemann and S. Grimme
- First principle calculations of dipole-dipole dispersion coefficients for the ground and first $n \rightarrow n^*$ excited states of some azabenzene/ P. Norman, A. Jiemchooroj and B.E. Sernelius
- Electronic and vibrational polarizability and first hyperpolarizability of charge transfer chromophores: Quantum chemistry investigation/ A. Saal and O. Duameral
- Electric dipole polarizability and hyperpolarizability of NCCN, NCCP, and PCCP/ T. Pluta and P. Zerzucha
- Ab initio calculation of the nonlinear susceptibility $\chi^{(2)}$ of a crystal surface/ I. Baraille, C. Darrigan and M. Rérat
- The molecular electric quadrupole moment and electric-field-gradient induced birefringence (Buckingham effect) of Cl$_2$/ C. Cappelli, U. Ekström, A. Rizzo and S. Coriani
- The calculation of excited-state polarizabilities of solvated molecules/ K. Ruud, B. Mennucci, R. Cammi and L. Frediani
