

Mobile Information Systems

An International Journal

Impact Factor: 1,325

Aims and Scope

Recent advances in wireless technology have led to mobile computing, a new dimension in data communication and processing. Many predict a new emerging, gigantic market with millions of mobile users carrying small, battery-powered terminals equipped with wireless connection, and as a result, the way people use information resources is predicted to be radically transformed. The International Journal of *Mobile Information Systems* (MIS) presents visionary concepts and stimulating ideas in mobile information systems at both the theory and application levels. The objectives of the journal are to be a source for mobile information systems research and development, and to serve as an outlet for facilitating communication and networking among mobile information systems researchers, practitioners, and professionals across academics, government, industry and students. The journal is published multiple times a year, with the purpose of providing a forum for state-of-the-art development and research, as well as current innovative activities in mobile information systems. The main goal will be to provide timely dissemination of information.
