Individual human development is influenced by a multitude of systems, ranging from cultural processes, genetic and physiological incidents up to social interactions. How do these systems cooperate and interact during the course of human development? One of the main goals of Developmental Science is finding an answer to this question.

Since it exceeds the means of researchers from individual scientific disciplines to investigate the simultaneous biopsychosocial changes of systems and how they jointly contribute to the social and adaptive functions of human individuals, a new scientific approach is necessary that links the various traditional scientific disciplines under a biopsychosocial approach to describe individual human development: Developmental Science.

Developmental Science combines concepts and insights from scientific disciplines, which hitherto used to independently tackle the research of human and non-human development. As an interdisciplinary approach it examines individuals across the lifespan with the objective of comprehending the development of individuals with different cultural and ethnic as well as biological background, different economic and cognitive potentials and under diverse living conditions. To facilitate the understanding of developmental processes it is also necessary to overcome the disadvantageous separation of “normal” from “abnormal” human development. Thus, the interdisciplinary field of Developmental Science comprises a holistic approach to understanding how different systems interact and influence development throughout life from genetic and physiological processes to social interactions and cultural processes.

The International Journal of Developmental Science is especially devoted to research from the fields of Psychology, Genetics, Neuroscience, and Biology and provides an interdisciplinary and international forum for basic research and professional application in the field of Developmental Science. The reader will find original empirical or theoretical contributions, methodological and review papers, giving a systematic overview or evaluation of research and theories of Developmental Science and dealing with typical human development and developmental psychopathology during infancy, childhood, adolescence and adulthood. All manuscripts pass through a multilevel peer-review process.
Recent Contents Volume 6, Number 3-4 (2012)

Special Issue: Entrepreneurship from a Developmental Science Perspective
Guest Editors: Martin Obschonka and Rainer K. Silbereisen

Entrepreneurship in Adolescence: A Relational Developmental Systems Approach
R.M. Lerner and W. Damon
DOI 10.3233/DEV-2012-12107

A Discovery Genome-Wide Association Study of Entrepreneurship
L. Quaye, N. Nicolaou, S. Shane and M. Mangino
DOI 10.3233/DEV-2012-12109

Social Competencies in Childhood and Adolescence and Entrepreneurship in Young Adulthood: A Two-study Analysis
M. Obschonka, K. Duckworth, R.K. Silbereisen and I. Schoon
DOI 10.3233/DEV-2012-12108

Tracing Entrepreneurship Orientation in Adolescence to Business Ownership
G.K. Saw and B. Schneider
DOI 10.3233/DEV-2012-12110

Self-Employment After Socialism: Intergenerational Links, Entrepreneurial Values, and Human Capital
M. Fritsch and A. Rusakova
DOI 10.3233/DEV-2012-12106

Patterns of Entrepreneurial Career Development: An Optimal Matching Analysis Approach
H. Zacher, T. Biemann, M.M. Gielnik and M. Frese
DOI 10.3233/DEV-2012-12111

Observed Gossip Moderates the Link between Anxious Withdrawal and Friendship Quality in Early Adolescence
M.M. Menzer, K.L. McDonald, K.H. Rubin, L. Rose-Krasnor, C. Booth-LaForce and A. Schulz
DOI 10.3233/DEV-2012-1211079
