

Call for Papers on Administrative Data

Please consider submitting a paper for a special issue of the [*Statistical Journal of the International Association for Official Statistics \(SJIAOS\)*](#) on the topic of administrative data. Increasing use of administrative data worldwide is of interest to governments, academia, the private sector, and wherever official statistics are produced. While the advantages of improved use of administrative data sources are evident to many, there are clear challenges in the use of these sources in fields ranging from epidemiology to agriculture. Assuring the quality of data, planning for thorough program evaluation, controlling costs, integrating data sources effectively, and developing appropriate analysis frameworks and applications represent only a few of the many challenges in producing usable data from administrative.

For the special issue being planned, papers may focus on any aspect of administrative data research and applications. Preference will be given to papers that describe recent administrative data initiatives under development since 2010. Papers presenting methodologies and techniques for improving and broadening the use and integration of administrative data sets to benefit the production of official statistics are especially welcome.

The deadline for submitting a manuscript is June 1, 2018.

All submissions will go through the SJIAOS review process. For information about manuscript preparation and the submission process, please see <https://www.iospress.nl/journal/statistical-journal-of-the-iaos/#submission-of-manuscripts>.

Authors are requested to submit their manuscript electronically to the [journal's editorial management system](#). The length of the manuscript would preferably be 10 - 15 pages including tables, graphs and references.

Special issue editor: Dr. Nancy Torrieri, Member of the SJIAOS Editorial Board, nktorrieri@gmail.com.
